Introduction to spreadsheets

STREAMLINED DATA INGESTION WITH PANDAS

Amany Mahfouz Instructor

Spreadsheets

- Also known as Excel files
- Data stored in tabular form, with cells arranged in rows and columns
- Unlike flat files, can have formatting and formulas
- Multiple spreadsheets can exist in a workbook

Loading Spreadsheets

• Spreadsheets have their own loading function in pandas: read_excel()

Loading Spreadsheets

```
import pandas as pd

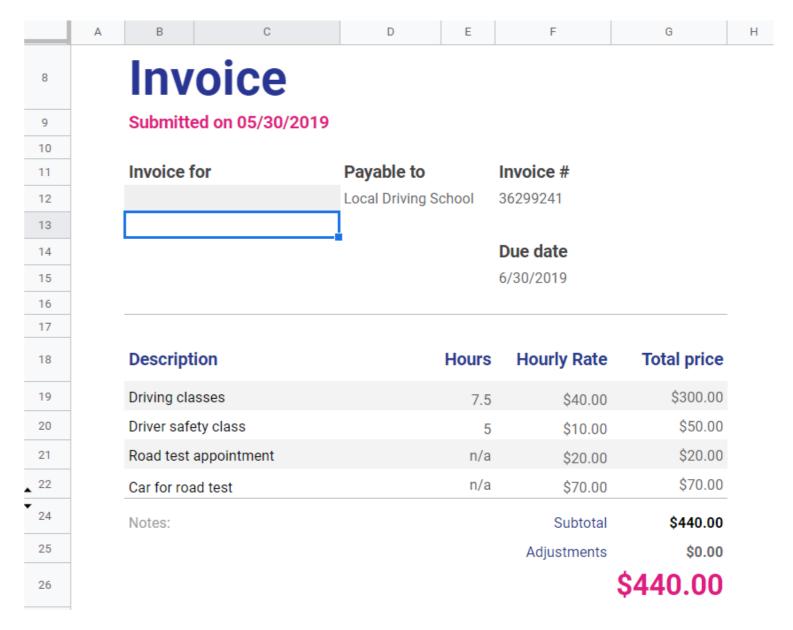

# Read the Excel file
survey_data = pd.read_excel("fcc_survey.xlsx")

# View the first 5 lines of data
print(survey_data.head())
```

- read_excel() has many keyword arguments in common with read_csv()
 - nrows: limit number of rows to load
 - skiprows: specify number of rows or row numbers to skip
 - o usecols: choose columns by name, positional number, or letter (e.g. "A:P")

Let's practice!

STREAMLINED DATA INGESTION WITH PANDAS

Getting data from multiple worksheets

STREAMLINED DATA INGESTION WITH PANDAS

Amany Mahfouz Instructor

Selecting Sheets to Load

- read_excel() loads the first sheet in an Excel file by default
- Use the sheet_name keyword argument to load other sheets
- Specify spreadsheets by name and/or (zero-indexed) position number
- Pass a list of names/numbers to load more than one sheet at a time
- Any arguments passed to read_excel() apply to all sheets read

Selecting Sheets to Load

| | Α | В | С | D | |
|----|-------|-------------------------|----------------|--------------------------|---------|
| 1 | Age | AttendedBootcamp | BootcampFinis* | BootcampLoanYesNo | Bootcan |
| 2 | 27 | 0 | | | |
| 3 | 34 | 0 | | | |
| 4 | 21 | 0 | | | |
| 5 | 26 | 0 | | | |
| 6 | 20 | 0 | | | |
| 7 | 28 | 0 | | | |
| 8 | 29 | 0 | | | |
| 9 | 29 | 0 | | | |
| 10 | 23 | 0 | | | |
| 11 | 24 | 0 | | | |
| 12 | 20 | 0 | | | |
| 13 | 22 | 0 | | | |
| < | ı | | | · | |
| | ▶ ▶ | + 2016 2017 | | | |

Loading Select Sheets

True

Loading All Sheets

• Passing sheet_name=None to read_excel() reads all sheets in a workbook

```
survey_responses = pd.read_excel("fcc_survey.xlsx", sheet_name=None)
print(type(survey_responses))
<class 'collections.OrderedDict'>
for key, value in survey_responses.items():
    print(key, type(value))
2016 <class 'pandas.core.frame.DataFrame'>
2017 <class 'pandas.core.frame.DataFrame'>
```

Putting It All Together

```
# Create empty data frame to hold all loaded sheets
all_responses = pd.DataFrame()
# Iterate through data frames in dictionary
for sheet_name, frame in survey_responses.items():
   # Add a column so we know which year data is from
   frame["Year"] = sheet_name
   # Add each data frame to all_responses
    all_responses = all_responses.append(frame)
# View years in data
print(all_responses.Year.unique())
```

```
['2016' '2017']
```

Let's practice!

STREAMLINED DATA INGESTION WITH PANDAS

Modifying imports: true/false data

pandas and Booleans

- pandas loads True / False columns as float data by default
- Specify a column should be bool with read_excel() 's dtype argument
- Boolean columns can only have True and False values
- NA/missing values in Boolean columns are changed to True
- pandas automatically recognizes some values as True / False in Boolean columns
- Unrecognized values in a Boolean column are also changed to True

Setting Custom True/False Values

- Use read_excel() 's true_values argument to set custom True values
- Use false_values to set custom False values
- Each takes a list of values to treat as True / False , respectively
- Custom True / False values are only applied to columns set as Boolean

Setting Custom True/False Values

Setting Custom True/False Values

print(bool_data.sum())

| dtype: object | |
| | AttendedBootCampYesNo AttendedBootcampTF BootcampLoan LoanYesNo LoanTF |

Boolean Considerations

- Are there missing values, or could there be in the future?
- How will this column be used in analysis?
- What would happen if a value were incorrectly coded as True?
- Could the data be modeled another way (e.g., as floats or integers)?

Let's practice!

STREAMLINED DATA INGESTION WITH PANDAS

Modifying imports: parsing dates

STREAMLINED DATA INGESTION WITH PANDAS

Amany Mahfouz Instructor

Date and Time Data

- Dates and times have their own data type and internal representation
- Datetime values can be translated into string representations
- Common set of codes to describe datetime string formatting

- Datetime columns are loaded as objects (strings) by default
- Specify that columns have datetimes with the parse_dates argument (not dtype!)
- parse_dates can accept:
 - a list of column names or numbers to parse
 - o a list containing lists of columns to combine and parse
 - a dictionary where keys are new column names and values are lists of columns to parse together

Non-Standard Dates

- parse_dates doesn't work with non-standard datetime formats
- Use pd.to_datetime() after loading data if parse_dates won't work
- to_datetime() arguments:
 - Data frame and column to convert
 - format : string representation of datetime format

Datetime Formatting

- Describe datetime string formatting with codes and characters
- Refer to **strftime.org** for the full list

Datetime Formatting

| Code | Meaning | Example |
|------|----------------------|---------|
| %Y | Year (4-digit) | 1999 |
| %m | Month (zero-padded) | 03 |
| %d | Day (zero-padded) | 01 |
| %H | Hour (24-hour clock) | 21 |
| %M | Minute (zero-padded) | 09 |
| %S | Second (zero-padded) | 05 |

Parsing Non-Standard Dates

| | BG | ВН | BI | ВЈ | BK |
|----|---------------------|---------------------|----------------|----------------|-------------------|
| 1 | Part1StartTime | Part1EndTime | Part2StartDate | Part2StartTime | Part2EndTime |
| 2 | 2016-03-29 21:23:13 | 2016-03-29 21:24:53 | 2016-03-29 | 21:24:57 | 03292016 21:27:25 |
| 3 | 2016-03-29 21:24:59 | 2016-03-29 21:27:09 | 2016-03-29 | 21:27:14 | 03292016 21:29:10 |
| 4 | 2016-03-29 21:25:37 | 2016-03-29 21:27:11 | 2016-03-29 | 21:27:13 | 03292016 21:28:21 |
| 5 | 2016-03-29 21:21:37 | 2016-03-29 21:28:47 | 2016-03-29 | 21:28:51 | 03292016 21:30:51 |
| 6 | 2016-03-29 21:26:22 | 2016-03-29 21:29:27 | 2016-03-29 | 21:29:32 | 03292016 21:31:54 |
| 7 | 2016-03-29 21:29:33 | 2016-03-29 21:30:40 | 2016-03-29 | 21:30:44 | 03292016 21:32:19 |
| 8 | 2016-03-29 21:24:58 | 2016-03-29 21:31:49 | 2016-03-29 | 21:31:51 | 03292016 21:33:08 |
| 9 | 2016-03-29 21:30:44 | 2016-03-29 21:33:58 | 2016-03-29 | 21:34:04 | 03292016 21:37:32 |
| 10 | 2016-03-29 21:33:05 | 2016-03-29 21:34:21 | 2016-03-29 | 21:34:25 | 03292016 21:35:40 |
| 11 | 2016-03-29 21:34:52 | 2016-03-29 21:36:17 | 2016-03-29 | 21:36:23 | 03292016 21:39:18 |
| 12 | 2016-03-29 21:32:59 | 2016-03-29 21:36:26 | 2016-03-29 | 21:36:29 | 03292016 21:39:27 |

Parsing Non-Standard Dates

```
print(survey_df.Part2EndTime.head())
```

```
0  2016-03-29 21:27:25
1  2016-03-29 21:29:10
2  2016-03-29 21:28:21
3  2016-03-29 21:30:51
4  2016-03-29 21:31:54
Name: Part2EndTime, dtype: datetime64[ns]
```

Let's practice!

STREAMLINED DATA INGESTION WITH PANDAS
